The information disclosure statement filed 4 April 2005 fails to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because it is unsigned. It has been placed in the application file, but the information referred to therein has not been considered as to the merits. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609 ¶ C(1).

The following is an examiner's statement of reasons for allowance:

The claimed ferrite is not taught or suggested by the cited art of record. While it is known in the art that the addition of CaO will improve the resistivity of the ferrite (as shown by U.S. patent 6,547,984:col. 2, lines 15-17; U.S. patent 6,077,453:col. 6, lines 47-49 and admitted by applicant in paragraph [0018]), it is also known in art that adding more than 0.2 wt% CaO will cause abnormal grain growth in the sintered ferrite which causes magnetic properties, such as core or eddy loss, to be degraded (U.S. patent 6,077,453:col. 6, lines 47-49 and admitted by applicant in paragraph [0018]). Applicant has unexpectedly found that by controlling the amount of Fe_2O_3 to less than 50 mol% and including Mn_2O_3 in an amount of 0.08 mol% or less, the addition of more than 0.2 wt% CaO will not cause abnormal grain growth.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
